GlobalPrameters Service

All what you need to run this service is to

- CREATE database GlobalParameters .
- Change database password in application.properties if u have one
- Run the Registry service eureka.

Description:

This service allows You to add, edit or delete the following Global parameters :

Status, Contracts, Roles, Currency and Holidays.

APIs of this Service :

NB: In this service: host = http://localhost:8088/api

1. Roles :

GET :

- host/roles : To get the list of all roles. (ADMINS && OFFICERS are the only ones allowed to call this)
- host/roles/{id} : To get a role with the given id. (ADMINS && OFFICERS are the only ones allowed to call this)

POST :

- host/roles : to create a role, the given data should be in this format: (ADMINS are the only ones allowed to call this)

```
{  "name": "RoleName",  "description": "Definition for the role"}
```

PUT :

- host/roles/{id} : to update a role with the given id, the given data should be in this format: (ADMINS are the only ones allowed to call this)

```
{  "name": "Update roleName",  "description": "Or update Definition for the role"}
```

DELETE :

- host/roles/{id} : To delete a role with the given id. (ADMINS are the only ones allowed to call this)

2. Status :

GET :

- host/status : To get the list of all status. (ADMINS && OFFICERS are the only ones allowed to call this)
- host/status/{id} : To get a status with the given id. (ADMINS && OFFICERS are the only ones allowed to call this)

POST :

- host/status : to create a status, the given data should be in this format: (ADMINS are the only ones allowed to call this)

```
{  "name": "StatusName",  "description": "Definition for the Status"}
```

PUT :

- host/status/{id} : to update a status with the given id, the given data should be in this format: (ADMINS are the only ones
