## Agency Service

All what you need to run this service is to\*\*

- CREATE database agencies .
- Add database password in application.properties if you have one
- Run the Registry service eureka.

### APIs of this Service :

NB: In this service: host = http://localhost:8086/api

#### GET :

- host/agencies : To get the list of all agencies. ( ADMINSS are the only ones allowed to call this )
- host/agencies/{id} : To get an agency by his id. ( ADMINs && OFFICERs who have AgencyId of the agency they try to access && CLIENT if he is a part of this agency , are all allowed to call this )

#### POST :

- host/agencies : to create a new agency , ( ADMINSS are the only ones allowed to call this ) the given data should be in this format:

```
{  "name": "Sidi Abad Agency",  "address": "Sidi asdddbad hda la Poste lol",  "phoneNumber": "0608358632756",  "fax": "+21206288908723"}
```

*Id and CreationDate is auto-generated, agencyChefId is null when we create and agency, we need to edit it when we've one by sending a PUT request!*

#### PUT :

- host/agencies/{id} : To update an existing agency ! ( ADMINSS are the only ones allowed to call this )

Especially when we've an agencyChefId, the format is :

```
{  "name": "Sidi Abad Agency",  "address": "Sidi asdddbad hda la Poste lol",  "phoneNumber": "0608358632756",  "fax": "+21206288908723"  "creationDate": "2020-05-10T22:32:31.331+0000",  "agencyChefId": 3                                // The Chef id.}
```

We should send GET first to get the data, and then send PUT that data: adding an agencyChefId.

#### DELETE :

- host/agencies/{id} : To delete an agency using its id. ( ADMINSS are the only ones allowed to call this )
