- `CREATE database requests .`
- `Change database password in application.properties`
- `Run the Registry service eureka.`

this service allows clients to submit a request (for example: change agency) and allows the responsible officer to process it

NB: In this service: `host = http://localhost:8084/api`

- `host/demandes` : To get the list of all requests. (`OFFICERS` are allowed to see requests of their agencies only)
- `host/demandes/{id}` : To get a request with the given id. (`OFFICERS` they must have the same agencyId as the owner of the request that they want to get OR `CLIENTS` :the owner of this request)
- `host/customer/demandes/{clientId}` : to get all requests of a customer by his id (`OFFICERS` they must have the same agencyId as the owner of these requests OR `CLIENTS` :the owner of these requests)
- `host/demandes/ByStatus/{status}` : to get request by the specified status. (`OFFICERS` are allowed to see requests of their agencies only)

P.S : status is an enum (values accepted are : *traite* or *enCours*)

- `host/demandes` : to create a request, (**CLIENTs are the only ones allowed to call this**) the given data should be in this format:

```
{
    "message": "Contenu de demande",
    "type": "objet de cette demande"
}
```

Id is auto-generated and the created demand the status *enCours* by default.

- `host/demandes/traite/{id}` : To make the specified demand traite (change of status value to traite) (**OFFICERS must have the same agencyId as the owner of the request that he want to edit**)

- `host/demandes/{id}` : To delete a request with the given id (**To delete :** OFFICERS they must have the same agencyId as the owner of the request OR CLIENTS :the owner of this request)
- `host/customer/demandes/{clientId}` : to delete all requests of a customer by his clientId (**To delete :** OFFICERS they must have the same agencyId as the owner of these requests OR CLIENTS :the owner of these requests)
